QUESTIONABLE HEALTH WEB SITES

Consider content, purpose, authority, and/or intended audience when evaluating (use evaluation checklists, such as the CRAAP Test or CARS).

Also consider potentially deceptive practices:

- Is advertising content clearly marked as such or is the sponsor clearly indicated?
- Does the site offer you information if you provide your email address?

Hypertension [bloodpressureregistertreatment.com/]

High Blood Pressure [verywellhealth.com/high-blood-pressure-4014706]

WebMed [webmd.com/] - Is the URL similarity to WebMD coincidental?

RELIABLE WEB SITES OR SECTIONS THAT TARGET THE WRONG AUDIENCE

Although these web sites come from credible institutions, they are inappropriate for your use because they are intended for patients rather than health care professionals.

Medline Plus [medlineplus.gov]

CDC Diseases & Conditions [www.cdc.gov/DiseasesConditions/]

American Heart Association Health Topics [www.heart.org/en/health-topics]
